A3: Timescape and the Exhibition

For our final project that we showcased at BIC, we had 3 separate projects that each member worked on and we automatically cycled through every 5 minutes.

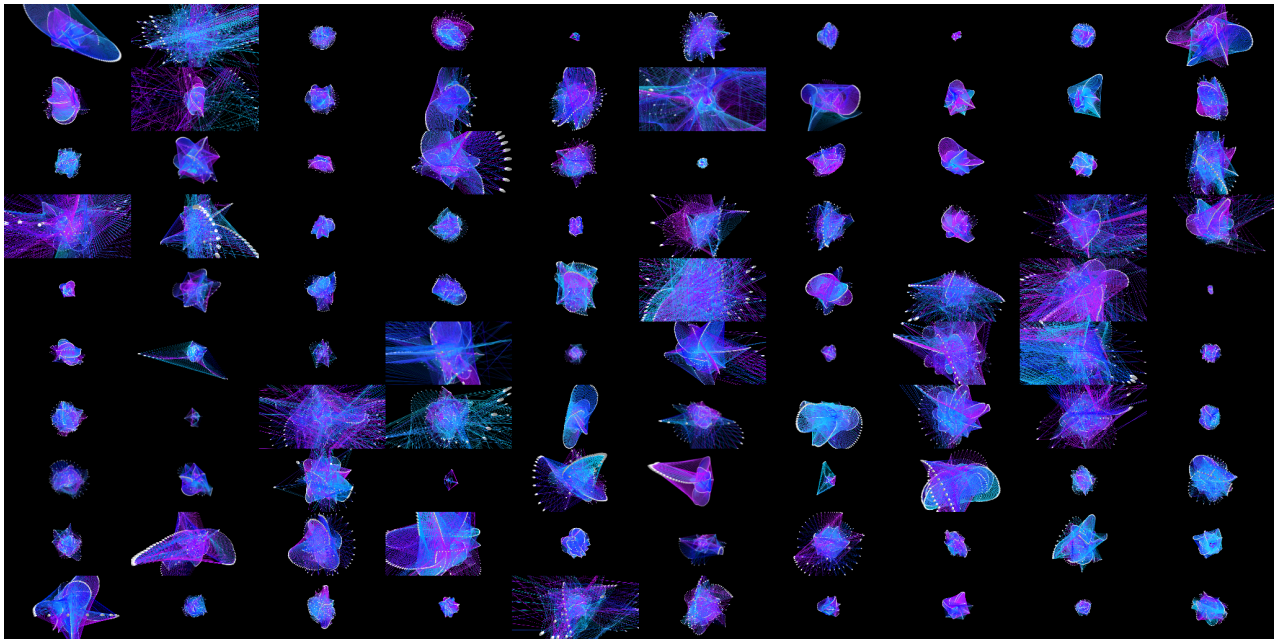

1. https://mouliknanda.github.io/timescape-Moulik/
2. https://theiniyaaalll-pixel.github.io/BIC-Tesseract/
3. https://heyitsnidi.github.io/Tesseract_Nidi/

A member of our team was present near our screen at all times to explain the concept of the timescape and the tesseract to all visitors and help them learn how to interact with the experience and control the visuals and sound that are created by their actions. Our project was an eye turner at the exhibition, and aside from the philosophical implications and meaning of the tesseract and its representation of time, it also brought a lot of joy to any visitor and passerby.

Showcasing our projects to visitors

My project, in particular, also has a screenshot functionality that gives people the opportunity to create their own generative art pieces, and to celebrate their creations made using this project, here is a collage of the first 100 art pieces that people made during the exhibition.

Getting to present this project at BIC and seeing people interact and experiment around with the project we created and iterated over through weeks of hard work was one of the most fulfilling moments of my time at Sristhi and really reinforced my confidence in my abilities as a designer. I would love to take this further, along with more generative art and interactive experiences because I love the reactions projects like these bring out of the audience.
